

A world map illustrating the global distribution of the Air Quality Index (AQI). The map is color-coded to show the level of air pollution across different countries. The legend indicates that green represents 'Very Clean' air quality, while red represents 'Very Polluted' air quality. The map shows that many countries in North America, Europe, and Australia have relatively clean air (green to yellow), while a large number of countries in South America, Africa, and Asia are in the red or dark red categories, indicating higher levels of air pollution. The map also shows that some countries in the Middle East and parts of Asia are in the orange or dark orange categories, indicating moderate to high pollution levels.
